Onderwerp: , is it possible to have a short telecom later today e.g. at 16:00 hrs?
Bijlagen: 20190213 - KEM-KNMI meeting.pdf

and myself would like to discuss options with you.

PS This weekend I looked at the NORSAR report and what they say on the accelerometers in Groningen. Some of it seems relevant.

Onderwerp: RE: Request for advice on an external reviewer of the Groningen seismic data

Attached a short note with further details. Obviously all this needs to be treated confidentially. Please note that contrary to what is stated in the note KNMI has not tested the sensor on a shake table. This will be done shortly for a number of them for which they will have to be taken out of the network temporarily.
