Dear &

Again a list of people/groups and thoughts:

First of all, I would say that there is some benefit in doing the rapid initial 'audit' of the immediate problem and the subsequent analysis by the same group – continuity, interest etc. But I understand that in terms of tendering it may be tricky.

Secondly, I would say that it might take as discussed a two-step approach:

- 1) An immediate feedback/audit on the technical issues that KNMI identified and the potential impact it may have (→ in 4-6 weeks from now)
- 2) A review of all procedures on sensor data from Groningen (incusing sensors in building, magnitudes, felt intensity report (?) etc.) (6-12 months from now=.

With respect to 1 & 2

- Albuquerque Seismological Laboratory (USGS) <https://earthquake.usgs.gov/contactus/albuquerque/> , Very experienced, no idea if they do consulting
- We (SED) could likely do it, but I would need to check if the key person ( ) is available so rapidly.
- as a company, <https://kinometrics.com> or <http://www.nanometrics.ca/> would have the knowledge, but you may not want a company doing the job? <http://www.isti.com/tag/seismic/> could also do this jobs.
- NORSAR should also have this knowledge, but I worry a little that they know less about strong motions and are actually too close with KNMI?
- At GFZ, The group of Fabrice Cotton would be good, <https://www.gfz-potsdam.de/en/staff/fabrice-cotton/sec26/>
- Another careful person and knowledgably person would be John Douglas <https://www.strath.ac.uk/staff/douglasjohndr/>
- In France, Pierr-Yves Bar is a good option. <https://isterre.fr/auteur/pierre-yves-bard?lang=fr>

I stop here ... too many options already ..

Best wishes
