Onderwerp: Possible press questions on the KNMI data matter

Dear members of the KEM team,

Yesterday, our Minister of Economic Affairs and Climate Policy published a parliamentary letter explaining the anomalies in the KMNI data and the possible effect on the risk assessments relating to the Groningen field.

Following the publication of this letter, State Supervision of Mines received press questions on the exact moment the Ministry was informed about the situation. We answered these question by providing a brief timeline of events.

It is possible that you, as members of the KEM team, and present during the clarification meeting on February 13th, will receive similar questions from the Dutch press.

I would like to state that if you need any assistance or further clarification, please don't hesitate to contact me or , senior policy officer on this subject in my direction. His email adress can be found in cc. His phone number is +31 .

Kind Regards,

Esther W.E. Pijs

Director Gastransition Groningen
